

Carpet and Upholstery Cleaning

What?

As part of modern design, many buildings have a vast array of floor types, included different types of carpets. Although providing aesthetic comfort, carpets can be difficult to maintain and preserving a high quality appearance can be challenging. Dirt and grime builds up, which encourages bacteria to harbour itself in the fibres of the carpet fabric.

Nviro can provide professional carpet cleaning tailored to your needs. Our approach includes the careful assessment of the characteristics of each carpet and to use a variety of cleaning methods that result in a clean and hygienic carpet. Before commencing any carpet cleaning task, we will consider:

- **Pile & Construction:** Cut Pile, Cut Loop, Saxony, Level Loop
- **Fibres:** Nylon, Polyester, Wool, Olefin
- Existing stains, soiling and blemishes
- Previous methods used

How?

We provide a flexible service in order to reduce the disruption to your day to-day business operations. We prefer to work out of hours, so that we can work freely around your building and achieve the best results possible. There are a number of carpet cleaning methods available, two popular methods are:

Encapsulation: This method involves using an innovative chemical that catches dirt and bacteria in between the carpet fibres. This method is ideal for thin pile carpets and leaves the carpets dry almost instantaneously, meaning the carpets can be walked on straight away if necessary.

Extraction: Wet extraction is the most common method which uses a combination of water and chemicals that soap the fibres and vacuums away the dirt collected by the applied water. This is ideal for areas with heavy staining and thicker pile carpets.

Why Use Nviro?

Ensuring an environment is hygienically clean as well as visibly clean is vital to the health and wellbeing of your customers and building users. Nviro will use the latest equipment and chemical strategies to provide this task, whilst ensuring staff are well training and able to carry out their work safely. Nviro pay great attention to detail and will make sure you are providing a safe, clean and hygienic environment for your building users and customers to thrive in.
