

# High Level Cleaning

## About High Level Cleaning

Many buildings have areas that are difficult to clean due to their height and position. In these areas dust, cobwebs and debris can collect, making the aesthetics of the building appear sub-standard and portrays an environment that is 'not clean'.

## What?

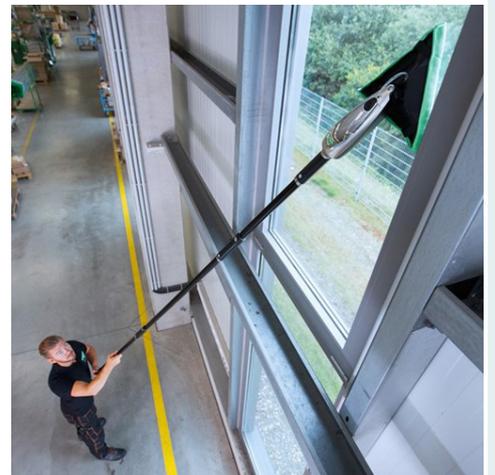

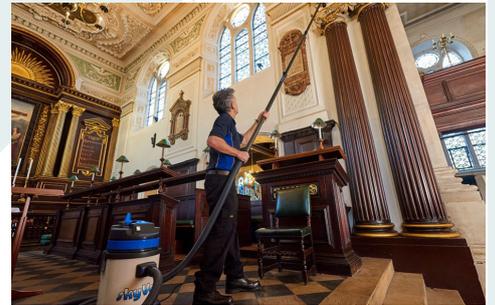

High level cleaning does not tend to be part of routine cleaning regimes, usually because of the type of equipment required and the risk to staff involved, when working at height. Therefore these areas can get left and a build-up of dirt occurs.

Nviro has the capability and expertise to provide the following high level cleaning services:

- Dusting and removing debris from ledges, lighting and ceilings
- Working internally and externally
- High level windows and glass
- Internal and External Window Cleaning

## Why Use Nviro?

Working at height can be dangerous and if the right equipment and methods are not used, this could result in unnecessary risk for the staff undertaking the task. Nviro will thoroughly risk assess all high level tasks and ensure that staff have the correct equipment and training ensuring tasks are carried out safely and effectively. Aesthetic and standards will be improved. These tasks are the extra attention to detail and will make sure you are providing a safe, clean and hygienic environment for your building users and customers to thrive in.

All training, processes and methods ensure safe working practices

**Induction training**, including accident reporting, safe machine operation, COSHH sheets, safety signs, PPE, fire, site safety rules including parking and evacuation procedures, environmental awareness

**Pictorial toolbox** talks giving practical training to carry out work activities safely

**Safe working practices** such as Manual Handling which includes guidance on kinetic lifting techniques with visual demonstrations

**Risk assessments, method statements and COSHH assessments**

**Skills assessment for new employees.** They are observed carrying out basic cleaning tasks that form part of their daily shift to ensure competency and adherence to our H&S procedures. If further training is required, this is carried out before working unsupervised
